AL DIECASTING

Aluminum castings are lightweight and able to withstand the high temperature.

- High operating temperatures
- Outstanding corrosion resistance
- Lightweight
- Amazing strength, hardness, stiffness and finishing
- Excellent EMI and RFI shielding properties
- Excellent thermal conductivity
- Full recyclability

- ① Inside Top Coating
- ② Inside Primer Coating
- ③ Aluminum Die Casting
- ④ Outside Primer Coating
- ⑤ Outside Top Coating

Coating

Marble : Heat resistant coating if sprayed for non-stick Strong & Long-lasting coating Easy Cook and Easy Clean

Diamond : Nano diamond particle is sprayed on the surface. Stronger than iron or stone but smooth.

High resistance of scratch, abrasion and corrosion. High heat resistance(5X copper, 140X stainless).

Ceramic :

- Normal Ceramic : Eco-friendly, Anti-discoloration
- Granite : Innovative coating strength based on strong combination-structure of numerous coating particles
- Inoble : Coating particles are combined strongly together in order to solidify and enhance powerful scratch resistance and hardness.
- 3D : Interior Coating (Anion, Ceramic) + Aluminum Body + Exterior Coating(Ceramic), which is heat preservation and anti-scratch. Non-stick under any temperature for easy cleaning. Non-heat-conductive handle. Cook with less or no oil for a healthy life style
- Titanium (Because of lightest and toughest characteristic, it is mostly used in aerospace) : Multi-coat nonstick with a unique mix of titanium particles blended into each coat Remarkable combination of high strength and low density offers exceptionally favorable strength-to-weight ratios Multi-layer internal reinforcement of titanium creates resistance to scratching, abrasion and wear that exceeds most internally reinforced and all conventiona nonstick coatings on the market.
- Quantanium : Internally reinforced, waterborne, multi-coat. The excellent scratch resistance produced by the incorporation of unique mix of titanium particles causes the coating to be harder and more durable than conventionally reinforced systems. Quantanium adheres to grit-blasted or smooth substrates

- Pressed AL has high purity(over 97%) of aluminum
- Excellent thermal conductivity allows to heat quickly & evenly spread across the bottom to up the sides of the cookware making it one of the best cooking surfaces available and save energy.
- Lightweight by pressed technique
- Full recyclability
- Coating process seals the aluminum preventing any direct contact between the core & food

Coating

Marble : Heat resistant coating if sprayed for non-stick Strong & Long-lasting coating Easy Cook and Easy Clean

Diamond : Nano diamond particle is sprayed on the surface. Stronger than iron or stone but smooth.

High resistance of scratch, abrasion and corrosion. High heat resistance(5X copper, 140X stainless).

Ceramic :

- Normal Ceramic : Eco-friendly, Anti-discoloration
- Granite : Innovative coating strength based on strong combination-structure of numerous coating particles
- Inoble : Coating particles are combined strongly together in order to solidify and enhance powerful scratch resistance and hardness.
- 3D : Interior Coating (Anion, Ceramic) + Aluminum Body + Exterior Coating(Ceramic), which is heat preservation and anti-scratch. Non-stick under any temperature for easy cleaning. Non-heat-conductive handle. Cook with less or no oil for a healthy life style
- Hard Anodized : The Hard Anodization process alters & hardens the structure of the cookware surface, making it incredibly abrasion resistant. Twice as hard as Stainless Steel. Combines the best attributes of a very hard surface treatment with the quick-even heat transfer of aluminum.
